■ Progress Test (Units 4 to 8) — Official Teacher Answer Key

CEFR B1 / B1+ English Language Course — Cecilia Chiappero (Universidad Nacional de Córdoba)

■ CONFIDENTIAL — FOR TEACHER USE ONLY (REMOVED FROM STUDENT PLATFORM VIEW)

■ Section a1: Listening Comprehension (25 Marks)

Topic: Panel Discussion 'Reimagining Society — Media, Health, Art & Innovation' (10 items × 2.5 pts = 25 marks)

Q1. B (15-minute walk or bike ride for essential services)

Q2. A (Decreased commuting stress directly improves gut microbiome and immunity)

Q3. B (Algorithms create echo chambers where misinformation spreads rapidly)

Q4. B (Democracy itself is undermined without media literacy)

Q5. B (Integrating AI tutoring and gamified learning platforms)

Q6. A (Contemporary art makes invisible issues emotionally tangible)

Q7. A (Reported Speech: Marcus said that media literacy WAS vital)

Q8. A (Passive form: Smart cities CAN BE DESIGNED to prioritize pedestrians)

Q9. A (Mixed Conditional: If people HAD EATEN better, they WOULD FEEL healthier)

Q10. B (Goal: Building resilient, sustainable, mentally healthy communities)

■ Section b1: Reading & Textual Analysis (25 Marks)

Topic: 'The Interconnected Modern Era: Digital Ecosystems, Urban Life, and Human Wellbeing' (10 items × 2.5 pts = 25 marks)

Q1. B (Unprecedented technological acceleration and structural transformation)

Q2. A (Algorithms prioritize user engagement over veracity)

Q3. B (Gut-brain axis links mental health to diet and physical environment)

Q4. B (Serotonin (key neurotransmitter produced by gut bacteria))

Q5. B (Automobile sprawl and noise pollution damage human biology)

Q6. B (Placing green spaces, markets, and healthcare within short walking distance)

Q7. A (Contemporary art sparks critical dialogue on pollution and surveillance)

Q8. B (AI and VR personalize learning at individual student pace)

Q9. A (Vocabulary: 'Veracity' = truthfulness / accuracy)

Q10. B (Overarching conclusion: Combining smart infrastructure & creativity empowers individuals)

■ Section c1: Language in Use — Grammar & Vocabulary (25 Marks)

Grammar & Vocabulary across Units 4–8 (15 items × 1.67 pts = 25 marks)

Q1. B (was reading) (Reported Speech: present continuous -> past continuous)

Q2. B (would launch) (Reported Speech: will -> would)

Q3. B (had adopted) (Mixed Conditional: past condition uses past perfect)

Q4. A (would have been) (Mixed Conditional: present state with past result)

Q5. A (are exhibited) (Present Passive Voice)

Q6. A (is believed) (Reporting Passive: 'It is believed that...')

Q7. A (have) (Causative Form: have + object + past participle)

Q8. B (inspected) (Causative Form: get + object + past participle)

Q9. B (who) (Relative Clause: pronoun for people)

Q10. A (which) (Relative Clause: pronoun for things)

Q11. A (echo chambers) (Unit 4 Media Vocabulary)	**Q12. B (microbiome)** (Unit 5 Health Vocabulary)
Q13. A (conceptual) (Unit 6 Art Vocabulary)	**Q14. A (sprawl)** (Unit 7 Urban Infrastructure Vocabulary)
Q15. A (gamification) (Unit 8 Educational Tech Vocabulary)	

✍■ Section d1: Writing Composition (15 Marks) & ■■ Section e1: Speaking (10 Marks)

Writing Model Option A: Smart Cities & Wellbeing (150–220 words):

Grammar & Vocab Targets: 15-minute city, gut-brain axis, reported speech, causative form, relative clauses

Model Essay: *"The 15-minute city model, which was introduced to address urban sprawl, has transformed how we view municipal health. In recent years, urban planners reported that residents living in walkable neighborhoods experienced lower stress levels and improved immunity. If cities had prioritized automobile infrastructure decades ago, communities would suffer from severe isolation today. By having green spaces and local markets constructed within a short walk, citizens are encouraged to exercise daily. Furthermore, reducing long commutes directly benefits the gut-brain axis, as lower chronic stress enhances gut microbiome diversity. In addition, schools that incorporate media literacy help residents navigate digital information without digital burnout. In conclusion, combining human-centered city design and balanced technology empowers citizens to lead healthier lives."*

Writing Model Option B: Media Literacy & Digital Education (150–220 words):

Grammar & Vocab Targets: echo chambers, gamification, passive voice, mixed conditional, reported speech

Model Essay: *"In today's digital era, social media algorithms often create echo chambers where fake news spreads rapidly. Education experts reported that media literacy is no longer optional for modern citizens. If schools had integrated digital critical thinking earlier, fewer people would be misled by viral misinformation today. Currently, gamified learning platforms are being deployed in classrooms to teach students how to verify online sources. Moreover, artificial intelligence, which provides personalized tutoring, allows learners to study at their own pace. By having educational content adapted to individual needs, teachers can focus on developing critical thinking. Ultimately, empowering citizens with media literacy ensures that technology serves democracy effectively."*
